

**AIRARMOUR™
DECON**
MOLD DECONTAMINATION KIT

BIO-OXYGEN® DECON PRO

For the remediation professional who wants to eliminate mold 100% of the time.

Mold Remediation/Disaster Restoration/Flood Mitigation

Artemis Bio-Oxygen® Decon Pro is the **most effective** mold elimination solution in the restoration industry!

Bio-Oxygen® Decon Pro is an EPA Registered Disinfectant, Fungicide, Bactericide and Algicide.

It is a **patented**, non-toxic 2-part activation formula that eradicates bacteria, mold, mildew and their odors by destroying them at their source. The guaranteed success of **Bio-Oxygen® Decon Pro** is achieved by combining the 2-part formula and using our delivery and application protocol. Decon Pro **searches and destroys, fractures and breaks down** the tough, outer mold spore shell allowing for the agent to enter and **eliminate the entire mold organism** and neutralize the toxins within. Decon Pro does not encapsulate but eliminates mold so it cannot hide out or go dormant. Decon Pro leaves a nontoxic residual barrier on the surface that **prevents mold**

re-growth. Decon Pro is **nontoxic, biodegradable, non-corrosive and non-flammable**. It **safely degrades** itself after the activation period to simply water and oxygen; no strange odors or oils left behind. It is **ultimately effective**, yet friendly to our environment and used by restoration and remediation professionals around the globe.

Professional Remediators can **fog, spray or foam** Decon Pro as the scope of work requires. Artemis **does not use toxic chemicals** like alcohol, bleach, phenols, or botanical oils that could cause allergies. Artemis products leave the surfaces clean, without any sticky residue or odors, **saving time and labor** costs in the final clean-up and re-build phases. **Using Decon Pro will ensure you pass the mold clearance test the first time.**

Advanced Chemistry for the **Professional Remediator**

More about Mold

Mold is a spore, which makes it extremely difficult to kill. When you scrub mold off of infected surfaces such as toilets, walls, and showers, the mold almost always grows back. This is because you have not killed the mold's reproductive cells, which are called spores.

Spores' genetic material is encased in a tough protein exterior. This armored shell makes the spore impervious to extremes of heat, chemical, and radiation. Spores can survive almost anywhere – even outer space.

When conditions are not conducive to growing, the spores simply become dormant and patiently wait until conditions are more favorable to growth. Once conditions are right – such as in damp, dark areas – the spores hatch, and your mold returns and begins multiplying. Mold spores can send off “seeds” in many directions at once and can travel up to three feet. Those “seeds” then grow and multiply on their own and quickly become difficult to contain.

Until now, spores have been virtually impossible to kill using any cleaner or disinfectant that wasn't extremely toxic to humans. Decon Pro is a military-grade, non-toxic formulation

that eradicates mold with extreme efficacy (99.99999%) and safely dissipates after the activation period to simple water and oxygen. That is why Artemis Bio Oxygen® Decon Pro is the most effective mold elimination solution in the restoration industry!

A Revolution in Mold Eradication and Prevention

Never before has there been a product that can degrade spores, bacteria and fungus without encapsulating. Decon Pro is a **class by itself of environmentally safe, non-toxic, ultra-powerful decontaminating formula** that eradicates bacteria, spores, molds, and fungus with **unprecedented efficacy**. Decon Pro creates an invisible non-toxic barrier on the surface that prevents mold from growing back. Encapsulates cover mold; Decon Pro annihilates mold; guaranteed! **Decon Pro outperforms any other remediation solution available!**

Homes, Offices, Commercial Buildings, Churches, Hospitals and Medical Facilities, Hotels, College Resident Halls, Athletic Facilities, Locker Rooms, Gymnasiums, Arenas, Nursing Homes, Veterinary Offices, Dental Offices, Farms, Food Manufacturing Plants, Food Service, Cruise Lines, Marinas and Yachts, Planes, Trains and Automobiles...Wherever there is mold and other contaminants! **Many Threats - One Solution™ Artemis Bio-Oxygen® Decon Pro.**

Artemis Bio-Solution's Proven Technology

Sandia National Laboratories has developed the most advanced full spectrum solution for chemical and biological decontamination. This formulation is currently being used by the US Military, Fema, and Federal agencies for neutralizing biological and chemical hazards from terrorist threats and neutralizing contamination after natural disasters like Super Storm Sandy and Hurricane Katrina. Sandia's decontamination formulation is so advanced they have patented the formula.

Artemis Bio-Solutions has been granted a license from Sandia, to utilize this patented technology for advanced mold remediation to formulate the Bio-Oxygen® Decon Pro, now available to professionals.
